PROFILE

Backend-focused full stack engineer with 3 years of experience building scalable distributed systems using Node.js, event-driven architecture, and backend system design principles. Designed configurable Business Rule Engine workflows, developed real-time Video KYC platform for banking clients, implemented asynchronous processing pipelines using RabbitMQ and MongoDB GridFS, leveraged MongoDB time-series collections for real-time dashboard analytics, and optimized system performance through efficient data modeling, indexing, caching, and archival strategies.

WORK EXPERIENCE

- Ezee.ai** 2025 – Present
Associate Software Engineer
 - Designed backend modules for low-code platform enabling dynamic workflows and configurable business logic.
 - Led and mentored junior team members, providing guidance on coding best practices and troubleshooting.
 - Took ownership of end-to-end module delivery, from requirement analysis to deployment and support.
- Ezee.ai** 2023 – 2024
Junior Member of Technical Staff
 - Designed and optimized Bash scripts for rapid processing of large files, significantly improving system efficiency.
 - Implemented asynchronous processing pipelines using RabbitMQ to handle bulk operations and improve system scalability.
 - Provided end-to-end platform support, ensuring high availability and quick resolution of production issues.
 - Built scheduler-driven CKYC upload module using Java Spring Boot for automated file processing.
- Ezee.ai** 2023 – 2024
Internship Trainee
 - Developed strong skills in JavaScript, Node.js, and MongoDB.
 - Managed Jenkins build triggers and Docker deployments on server.

SKILLS

Backend: Node.js, Express.js, REST APIs, GraphQL, Bash, Job Scheduling (Cron)
Frontend: Angular, TypeScript, HTML, CSS.
Databases: MongoDB (GridFS, Aggregation Pipeline, Time series collections), SQL, Redis.
Messaging & Async Processing: RabbitMQ, Kafka.
DevOps & Cloud: Docker, Jenkins, Nginx, Azure.
Monitoring & Logging: Grafana, Application Logging (Winston logger)
Architecture: Microservices, Event-driven , API-driven , Config-driven/Low-code Platform , Modular Architecture.

PROJECTS

- Business Rule Engine (BRE)**
Node.js, MongoDB GridFS, RabbitMQ, Hot Formula Parser
 - Designed and developed a configurable rule engine enabling dynamic business logic execution without code redeployment.
 - Implemented event-driven batch processing using RabbitMQ to support scalable and distributed rule evaluations.
 - Engineered large-scale data handling using MongoDB GridFS for high-volume rule computation and storage optimization.
- Incentive Management System (Jio Payment Bank BC Incentives)**
Angular, Node.js, Batch Processing
 - Designed backend services for large-scale incentive calculations processing high-volume transactional data.
 - Built reusable Angular dashboard components with optimized API integration and asynchronous data handling.
 - Implemented job schedulers and batch workflows to automate payout processing and reporting pipelines.
- Video KYC Processing Platform (Banking Clients – IDBI Bank, Nepal-based Banks)**
Node.js, GraphQL, WebSockets, Janus Media Server, Azure/S3, Bash
 - Developed real-time KYC workflow using GraphQL APIs and WebSocket-based communication for live updates.
 - Optimized video processing pipelines integrated with Janus media server, Reduced processing latency by 80% by optimizing video pipelines using Bash and ffmpeg.
 - Designed indexed database queries and automated notification workflows to improve reporting efficiency and system responsiveness.
- Developer Portfolio**
Angular, Three.js, Animations, Formspre
 - Built interactive 3D portfolio using Three.js with performance-optimized animations.
 - Integrated automated contact workflows using Formspre.

CERTIFICATES

TechA Cloud Computing using Microsoft Azure Certification - Infosys
Java Spring Boot & JDBC Certification – Jspiders

EDUCATION

SKSJT Engineering College 2021
Bachelor of Engineering
CGPA: 7.65
