PROFILE

A motivated and detail-oriented software developer with hands-on experience in backend, frontend and server-side technologies, including Node.js, Angular, MongoDB, Docker, and API integrations. Aiming to contribute to a forward-thinking organization by delivering high-quality solutions, solving complex challenges, and continuously expanding technical expertise.

WORK EXPERIENCE

Ezee.ai 2025 – Present

Associate Software Engineer

- Developed and enhanced core platform features, contributing to major product releases and performance improvements.
- Led and mentored junior team members, providing guidance on coding best practices and troubleshooting.
- Took ownership of end-to-end module delivery, from requirement analysis to deployment and support.

Ezee.ai 2023 – 2024

Junior Member of Technical Staff

- Designed and optimized Bash scripts for rapid processing of large files, significantly improving system efficiency.
- Delivered major feature releases and enhancements, driving product stability and scalability.
- Provided end-to-end platform support, ensuring high availability and quick resolution of production issues.

Ezee.ai 2023 – 2024

Internship Trainee

- Developed strong skills in JavaScript, Node.js, and MongoDB.
- Managed Jenkins build triggers and Docker deployments on server.

SKILLS

Node.js

Expertise in building scalable and high-performance backend services using Node.js with Express, implementing RESTful APIs, and optimizing event-driven architectures for concurrency and efficiency.

Docker

Proficient in containerizing applications using Docker for consistent development, testing, and production environments; experienced in managing multi-container deployments with Docker Compose.

MongoDB

In-depth knowledge of NoSQL database design, leveraging MongoDB for scalable, high-performance applications; proficient in GridFS for large file handling, index optimization, and advanced aggregation pipelines.

SQL

Skilled in designing and optimizing relational database schemas, writing complex joins and stored procedures, and improving query performance using indexing and execution plan analysis.

Angular

Skilled in responsive and dynamic single-page applications using Angular, with efficient component-based architecture. Experience in integrating REST APIs, handling asynchronous data flows, and building scalable frontend structures.

Bash Script

Strong command over Bash scripting for automating repetitive tasks, system monitoring, and large-scale file processing in Linux environments

EDUCATION

SKSJTI Engineering College

B.E

CGPA: 7.65

2021

PROJECTS

Business Rule Engine (BRE)

Node.js, MongoDB GridFS, RabbitMQ, Hot Formula Parser

Architected dynamic rule engine enabling configurable business logic execution without redeployment.

- Implemented distributed batch processing using RabbitMQ improving scalability.
- Designed large data storage with GridFS supporting high-volume rule evaluations

Incentive Management System

(Jio Payment Bank BC Incentives)— Angular, Node.js, Batch Processing

- Built scalable incentive calculation system handling large transactional datasets.
- Developed Angular dashboards with reusable components and optimized API integration.
- Implemented schedulers and batch workflows for automated payout processing.

Video KYC Processing Platform

GraphQL, Janus Server, Azure/S3, WebSockets, Bash

- Developed real-time KYC processing with GraphQL listings and indexed database queries.
- Automated video processing using Bash scripts integrated with Janus media server.
- Built real-time dashboards, reporting, and email notification systems.

Developer Portfolio

Angular, Three.js, Animations, Formsprée

- Created interactive portfolio with 3D Three.js models and optimized web animations.
- Implemented automated email contact workflow using Formsprée.
